additional information:

Stacking units require at least one return wall. Do not attempt to connect frames lying on the floor. Frames must always be upright when assembling stacking configurations. Spot lights not included.

Easy push-fit fabric graphics go into channels.

2 person assembly recommended:

Connection Methods & Notes

Connection Method 1: Corner Hub & End Cap

The scissor frames will have this corner hub installed on all four corners, front and back of the frame. This corner hub takes the end caps of the channel bars. The end caps of the channel bar will snap into place.

Connection Method 2: Middle Hub & Middle Cap

The scissor frames will have middle hubs with a metal prong installed on all four sides front and left and right sides of back. Attach the middle caps of the channel bars onto the middle hubs. The middle caps of the channel bar will snap into place.

Connection Method 3: Silicon Edge Graphics

To apply the silicone edge graphic, start by pressing the SEG into the top left corner hub of the frame. Continue to press the SEG into the extrusion bar fabric channel. Keep pressing the SEG into the bar fabric channel until you make down to the bottom right corner hub of the frame. This also works for the second printed graphic option on the back side of the frame when horizontal channel bars are installed.

As an optional feature, the front printed graphic may have end cap graphics with silicone edge. Pull the end cap silicone edge to the top of the back corner hub. Start to press in the SEG into the hub and work your way down the side channel. Do the same for the opposite end cap.

Kit Assembly

Step by Step

Step 1.

Begin with the scissor frame, expand it flat out on the floor.

Step 2.

With the frame flat on the floor, snap all the locking arms into place. The side with the dove tail hub design is the bottom of the frame.

Step 3.

Gather all the bungee channel bars and slide them together.

Step 4.

With the frame laid out flat on the floor, carefully attach the channel bars onto the front and back side of the frame. You can stand the frame upright without the stabilizing bases if your frame is 2 quads high or less.

1 and 2 for more details.

Kit Assembly

Step by Step

Step 5.

Attach the stabilizing bases on the frames that are 3 quads high or taller. Secure them in place while you stand the frame upright.

Step 6.

First, take the front graphic with end caps and attach it to the frame. Start at point 1 and work the silicon edge into the channel bars ending at point 2.

Then, take the end cap and fold it back towards the back channel starting at point 3. Work the silicon edge down to point 4. Do the same for the opposite end cap.

Reference Connection Method(s) 3 for more details.

Step 7.

Optional spot light clip setup.

First, slide the light clip onto the frame top channel. Place it symmetrically centered. Next, slide the light onto the clip.

Spot lights sold separately.

Step 8.

Setup is complete.
